

Martin J. Savage is a Senior Fellow in the Institute for Nuclear Theory and Professor of Physics at the University of Washington. He received his undergraduate (1983) and Masters degrees (1984) from the University of Auckland in New Zealand, and his PhD in theoretical particle physics from Caltech in 1990. He held Postdoctoral positions at Rutgers University (1990-1991) and UC San Diego (1991-1993), followed by a faculty position at Carnegie Mellon University (1993-1996). His research, carried out with the NPLQCD collaboration, involves the use of high performance computing to determine the interactions and properties of light nuclear systems using the numerical technique of lattice quantum chromodynamics. He has more than 150 peer-reviewed publications on a range of topics in nuclear and particle physics. He has received a Humboldt Foundation Research Award (2012), an IBM Faculty Award (2012), a DOE Outstanding Junior Investigator Award (1995-1997), a Superconducting Super Collider Fellowship (1992-1993), and is a Fellow of the American Physical Society (2002). He has served on numerous advisory committees and boards, and co-organized a numerous scientific workshops.
