OAK RIDGE, Tenn., Sept. 07, 2016 – The Department of Energy’s Exascale Computing Project (ECP) today announced its first round of funding with the selection of 15 application development proposals for full funding and seven proposals for seed funding, representing teams from 45 research and academic organizations.

The awards, totaling $39.8 million, target advanced modeling and simulation solutions to specific challenges supporting key DOE missions in science, clean energy and national security, as well as collaborations such as the Precision Medicine Initiative with the National Institutes of Health’s National Cancer Institute.

Exascale refers to high-performance computing systems capable of at least a billion billion calculations per second, or a factor of 50 to 100 times faster than the nation’s most powerful supercomputers in use today.

The application efforts will help guide DOE’s development of a U.S. exascale ecosystem as part of President Obama’s National Strategic Computing Initiative (NSCI). DOE, the Department of Defense and the National Science Foundation have been designated as NSCI lead agencies, and ECP is the primary DOE contribution to the initiative.

The ECP’s multi-year mission is to maximize the benefits of high performance computing (HPC) for U.S. economic competitiveness, national security and scientific discovery. In addition to applications, the DOE project addresses hardware, software, platforms and workforce development needs critical to the effective development and deployment of future exascale systems.

First-round funding (see list at bottom) includes a broad set of modeling and simulation applications with a focus on portability, usability and scalability. A key consideration in the selection process was each team’s emphasis on co-design of the applications with the ECP’s ongoing development of hardware, software and computational capabilities, including physical models, algorithms, scalability and overall performance.

Projects will be funded in the following strategic areas: energy security, economic security, scientific discovery, climate and environmental science, and healthcare.

“These application development awards are a major first step toward achieving mission critical application readiness on the path to exascale,” said ECP director Paul Messina.

“A key element of the ECP’s mission is to deliver breakthrough HPC modeling and simulation solutions that confidently deliver insight and predict answers to the most critical U.S. problems
and challenges in scientific discovery, energy assurance, economic competitiveness, and national security,” Messina said. “Application readiness is a strategic aspect of our project and foundational to the development of holistic, capable exascale computing environments.”

Leadership of the Exascale Computing Project comes from six DOE national laboratories: The Office of Science’s Argonne, Lawrence Berkeley, and Oak Ridge national labs, and NNSA’s Los Alamos, Lawrence Livermore, and Sandia national labs.

The full list of application development awards follows:

**Full Funding:**

1. *Computing the Sky at Extreme Scales*, Salman Habib (ANL) with LANL, LBNL
2. *Exascale Deep Learning and Simulation Enabled Precision Medicine for Cancer*, Rick Stevens (ANL) with LANL, LLNL, ORNL, NIH/NCI
3. *Exascale Lattice Gauge Theory Opportunities and Requirements for Nuclear and High Energy Physics*, Paul Mackenzie (FNAL) with BNL, TJINAF, Boston University, Columbia University, University of Utah, Indiana University, UIUC, Stony Brook, College of William & Mary
5. *Exascale Modeling of Advanced Particle Accelerators*, Jean-Luc Vay (LBNL) with LLNL, SLAC
7. *Exascale Predictive Wind Plant Flow Physics Modeling*, Steve Hammond (NREL) with SNL, ORNL, University of Texas Austin
10. *Transforming Additive Manufacturing through Exascale Simulation (TrAMEx)*, John Turner (ORNL) with LLNL, LANL, NIST
12. *High-Fidelity Whole Device Modeling of Magnetically Confined Fusion Plasma*, Amitava Bhattacharjee (PPPL) with ANL, ORNL, LLNL, Rutgers, UCLA, University of Colorado

14. *Transforming Combustion Science and Technology with Exascale Simulations*, Jackie Chen (SNL) with LBNL, NREL, ORNL, University of Connecticut

15. *Cloud-Resolving Climate Modeling of the Earth’s Water Cycle*, Mark Taylor (SNL) with ANL, LANL, LLNL, ORNL, PNNL, UCI, CSU

Seed Funding

1. *Enabling GAMESS for Exascale Computing in Chemistry & Materials*, Mark Gordon (Ames) with ANL, ORNL, Iowa State University, Georgia Tech, Old Dominion University, Australian National University, EP Analytics, NVIDIA

2. *Multiscale Coupled Urban Systems*, Charlie Catlett (ANL) with LBNL, NREL, ORNL, PNNL

3. *Exascale Models of Stellar Explosions: Quintessential Multi-Physics Simulation*, Daniel Kasen (LBNL), with ANL, ORNL, Stony Brook, University of Chicago

4. *Exascale Solutions for Microbiome Analysis*, Kathy Yelick (LBNL) with LANL, Joint Genome Institute

5. *High Performance, Multidisciplinary Simulations for Regional Scale Seismic Hazard and Risk Assessments*, David McCallen (LBNL) with LLNL, UC Davis, UC Berkeley

7. *Optimizing Stochastic Grid Dynamics at Exascale*, Henry Huang (PNNL) with ANL, NREL

About ECP

The ECP is a collaborative effort of two DOE organizations – the Office of Science and the National Nuclear Security Administration. As part of President Obama’s National Strategic Computing initiative, ECP was established to develop a capable exascale ecosystem, encompassing applications, system software, hardware technologies and architectures, and workforce development to meet the scientific and national security mission needs of DOE in the mid-2020s timeframe.

About NNSA

Established by Congress in 2000, NNSA is a semi-autonomous agency within the U.S. Department of Energy responsible for enhancing national security through the military application of nuclear science. NNSA maintains and enhances the safety, security, and effectiveness of the U.S. nuclear weapons stockpile without nuclear explosive testing; works to reduce the global danger from weapons of mass destruction; provides the U.S. Navy with safe
and effective nuclear propulsion; and responds to nuclear and radiological emergencies in the U.S. and abroad.

**About the Office of Science**

DOE’s Office of Science is the single largest supporter of basic research in the physical sciences in the United States, and is working to address some of the most pressing challenges of our time. For more information, please visit [http://science.energy.gov/](http://science.energy.gov/).
