The research programs under the cognizance of the Division of Physical Research consist primarily of fundamental theoretical and experimental investigations designed to support the objectives of ERDA. These programs are directed toward discovery of natural laws and new knowledge, and to improved understanding of the physical sciences as related to the development, use, and control of energy. The ultimate goal is to develop a scientific underlay for the overall ERDA effort and the fundamental principles of natural phenomena so that these phenomena may be understood and new principles formulated.

The Director of the Division of Physical Research reports to ERDA's Assistant Administrator for Solar, Geothermal and Advanced Energy Systems. The scientific and technical activities of the Division are organized into four functional areas: (1) high energy physics, (2) nuclear sciences, (3) materials sciences, and (4) molecular, mathematical and geo-sciences, each headed by an Assistant Director. Taken together, the physical research programs represent about 30 percent of the Nation's Federal support of basic research in the physical sciences. The research activities of the Division involve more than 6,000 scientists and engineers working in Federal, university, and industrial laboratories throughout the United States.

Starting October 1, 1976, the Government Fiscal Year was changed to cover an October 1-September 30, period. Fiscal Year 1977 thus covers the year ending September 30, 1977. For 1976 a one-time "transition quarter" (TQ: July 1-September 30, 1976) was authorized to accomplish this change. Amounts and figures in this report reflect a 15-month period (FY 1976 plus the transition quarter), which should be borne in mind if comparisons with prior or future years or annual levels are made.
SUMMARY

Approximately four-fifths of the total physical research program costs are associated with research conducted in ERDA-owned, contractor (non-Federal)-operated, Federally Funded Research and Development Centers (FFRDC's). The major portion of these costs are spent at the well-known multi-program "national" laboratories at Argonne, Illinois; Berkeley, California; Brookhaven, New York; Los Alamos, New Mexico; and Oak Ridge, Tennessee; and at the high energy physics research centers at Batavia, Illinois; and Stanford, California.

A little less than one-fifth of the costs are associated with the support of research conducted in other laboratories (designated "off-site"). Virtually all of the off-site research is conducted at educational institutions, and is based almost entirely on unsolicited proposals.

There is no clear line of demarcation between National Laboratories, other Federally Funded Research and Development Centers, and off-site laboratories. The ERDA investment in facilities ranges from zero for some contractors to tens of millions of dollars for others, and the annual level of ERDA support ranges from a few thousand dollars for some contractors, to tens of millions of dollars for others—the spectrum is broad with no significant breaks.

Some of the FFRDC's research and development activities include programs in, e.g., solar energy, biomedical and environmental research, reactor research and development, waste management and transportation or controlled thermonuclear research. These activities are funded from sources other than the Division of Physical Research. The physical research program at these FFRDC laboratories provides, in varying degrees, some of the basic investigations underlying the more applied or developmental activities of such laboratories. Other FFRDC's include laboratories that are engaged in research in a single, well-defined area. All FFRDC's have the following common characteristics:

1. They are operated for the Federal Government by universities, not-for-profit organizations or private industry.
2. They are treated as national facilities.
3. They represent large investments (several millions of dollars) in ERDA-owned capital facilities.
4. They have large annual levels (several millions of dollars) of ERDA support.

The objective of the basic research program is to search for and discover new knowledge within the mission-oriented framework of ERDA. It is from this expanding reservoir of knowledge that developmental accomplishments are ultimately achieved. The off-site program complements the FFRDC's in the advancement of science in those disciplines that are fundamental to ERDA's programs.

The off-site contract-research program has a number of distinct benefits:

1. When the amount provided by ERDA is added to other funds available to the contractor, the effectiveness of the contractor's program, as well as the basic research effort of ERDA is increased.
2. ERDA receives the services, in basic research activities fundamental to ERDA's future capabilities, of highly qualified scientists who prefer employment at outside laboratories or who prefer to teach and to do research at educational institutions.
3. The contract-research program, by providing for the conduct of research at educational institutions, contributes to the education and training of scientists in fields relevant to ERDA's programs.

Funds provided by the Division of Physical Research for construction and for miscellaneous research-support activities, such as for other Federal agencies, National Academy of Sciences committees, special analyses, awards, exhibits, conferences, book translations, certain computers and general purpose equipment at some of the major research centers, etc., have been excluded from this report.

The following table summarizes the level of effort of the physical research programs as of October 1, 1976 (excluding items discussed above). No attempt has been or should be made to add the dollar levels of FFRDC's to those of the off-site program in this analysis since they are not arrived at on comparable bases. The funding levels of FFRDC's reflect FY 1976 plus transition quarter (15 months) outlays for operations and capital equipment while the dollar figures for the off-site program generally represent the contract amounts authorized, as distinguished from costs incurred, for all contracts in effect as of October 1, 1976, including funds provided for equipment regardless of who retains title. Under ERDA's split appropriations system, a separate appropriation is provided for the acquisition of capital equipment, title to which remains in the Government.

FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS

For purposes of this report, the following may be considered FFRDC's operated for ERDA (including only those supported in whole or in part under the physical research program). The listing is consistent with "Federally Funded Research and Development Centers" as defined by the National Science Foundation.

</table>
In conducting this program, ERDA typically uses a special research support agreement. Under this type of agreement, the ERDA will contribute to the cost of performing the research, up to a specified amount (referred to as the "support ceiling"), in consideration for the performance of proposed research activities broadly defined in the agreement and in accordance with the provisions of the agreement.

When the special research support agreement is used for not-for-profit organizations other than educational institutions, ERDA's commercial cost principles may be used in determining actual cost, or the contract provisions may be revised to provide for a lump-sum payment to the contractor in consideration for its commitment to perform particular research at a specified level of effort.

Very large projects, and in all cases those with an estimated cost in excess of $500,000 annually, are financed by means of a cost-type contract which permits closer ERDA surveillance of the work in accordance with appropriate contractual provisions not included in the special research support agreement. This type of contract is generally used for large-scale research programs performed in laboratories using equipment or facilities that are usually either partially or wholly ERDA owned or controlled and/or for projects that do not lend themselves to accurate cost estimates. The total costs of the research may be shared by the contractor and ERDA.

Occasionally, no-fund contracts are used in the contract-research program when ERDA loans property to an outside organization as ERDA's support to the research project or when the organization wishes to enter into a study contract in a certain area of research before it actually undertakes the research. Also, contracts are frequently extended without additional funds being added when the research project is being completed or terminated and additional time is required to bring that project to an orderly close.

In most cases, the contractor proposes to share in the cost of the work conducted under the contract. In order to support the maximum number of important and worthwhile projects within the limits of available funds and to have tangible evidence of a university's interest in the proposed research, it is ERDA policy to encourage cost-sharing by the universities. Although sharing by the institution in the cost of the project is desirable, such sharing is not a prerequisite for ERDA support, which, in the final analysis, is determined by the prospective quality of the proposed research, the relative interest of ERDA and the institution in the research, and availability of funds on the part of both ERDA and the contractor. Thus, ERDA will pay up to the full cost of a research project.

Most research contracts are written for terms of one year, renewable for additional annual terms. Sometimes contract terms may run somewhat more or less than one year (e.g., 9 or 15 months), usually for the purpose of establishing a different renewal date. There may also be cases where the contract may be written for several (usually three) years, but with the legal commitment for funding remaining on an annual basis. Occasionally, multi-year contracts with full funding are executed, generally where procurement of a major piece of equipment is involved, or where the nature of the research project is such that a clearly defined, fixed term can be established within which the entire research can be carried out.

In practice, contracts tend to run for several years, some for as much as ten years or more. Most research projects are not of the type that can be completed in one year, or in any specified longer time period that can be estimated in advance with reasonable accuracy. This is informally recognized by the parties concerned, whenever a new research project is approved for support and the customary one year contract written.

An examination of the age at termination of contracts that have terminated in recent years shows that about 15% had been in effect for less than 3 years, some 25% for 3 to 5 years, 30% for 5 to 10 years, and about 30% for 10 years or more, and that the average age at termination was 7½ years.
Proposals for research contracts are usually initiated by the scientist interested in doing the work and are submitted through administrative channels of his institution to ERDA Headquarters. Those interested in submitting proposals for research support under this program may obtain a copy of a "Guide for the Submission of Research Proposals" from ERDA Headquarters, Washington, D.C. 20545, or from an ERDA field office.

Scientific reports on basic research investigations are usually published in the open literature. Special reporting of results in detail before they are ready for publication generally is not required of the contractors. ERDA supports open publication and wide dissemination as the normal and most desirable means for reporting the findings of fundamental research.

During Fiscal Year 1976 and transition quarter (15 months), the Division of Physical Research received 518 formal unsolicited proposals for new research, representing requests for a total of $44.2 million. On hand at the beginning of FY 1976 pending reviews were 190 new proposals requesting $13.0 million, for a total of 708 proposals representing requests for $58.1 million ($ in millions):

The severity of the competition for available funds for new research projects can be seen if new award amounts are compared with the requests received during the past 10 years ($ in millions):
Under ERDA's annual review and renewal system, the yearly turnover rate, i.e., numbers of new projects approved and existing contracts terminated, during the 1960's tended to be in the 10-15% range, with an average of some 60 new contracts written and a corresponding number of old contracts terminating each year. In the early 1970's however, numbers of new projects started were sharply lower and terminations higher, resulting in a significant reduction in numbers of active contracts. New contracts, for administrative reasons, sometimes are written as separate new tasks under an existing contract; likewise, existing contracts occasionally may be split into two or more separate contracts, or several contracts may be combined into one. The following table illustrates the situation FY 1967-1976 ($ in millions):

<table>

Again here, it is important to note that dollar figures pertaining to the off-site program generally represent contract amounts authorized, as opposed to costs incurred, and include funds provided for equipment regardless of who takes title. Contract research projects in effect as of October 1, 1976 and supported by the ERDA Headquarters Division of Physical Research are listed on pp. 15-35 by functional area, and including the name and location of the contractor, the name(s) of the principal investigator(s), a short descriptive title of the research, and the level of ERDA support (i.e., contract amount authorized) during the most recent funding period. The amounts listed are for one year unless otherwise indicated. A summary of contracts by State appears on pp. 11-14.

</table>
Adelphi University, Garden City, New York. John P. Dooher, Theoretical Studies and Analysis of High Multi Gamma Ray Events in pp Collisions at ISR. $15,000.

Brandeis University, Waltham, Massachusetts. Lawrence E. Kirsch and Howard J. Schnitzer, Research in Elementary Particle Physics. $229,000 (14 months).

California Institute of Technology, Pasadena, California. Robert L. Walker, Experimental, Theoretical and Phenomenological Research. $2,005,000 (15 months).

California, University of, Irvine, California. Frederick Reines, Research Program in Neutrino Physics, Cosmic Rays and Elementary Particles. $620,000 (18 months).

California, University of, Irvine, California. Jonas Schultz and Paul E. Condon, Study of Elementary Particle Interactions. $300,000 (18 months).

California, University of, Los Angeles, California. Harold K. Ticho and Donald H. Stork, Research in High Energy Physics. $613,000 (18 months).

California, University of, Riverside, California. Robert T. Poe and Anne Kernan, High Energy Physics. $425,000 (19 months).

California, University of, San Diego, California. Oreste Piccioni and Norman Kroll, Experimental and Theoretical Particle Physics. $685,005 (15 months).

California, University of, Santa Barbara, California. David O. Caldwell, High Energy User Group. $278,000.

California, University of, Santa Cruz, California. Clemens A. Heusch, Experimental Elementary Particle Research. $325,000 (11 months).

Cincinnati, University of, Cincinnati, Ohio. Peter Suranyi, Inelastic Strong Interactions at High Energies. $15,000.

Florida State University, Tallahassee, Florida. Joseph E. Lannutti, Elementary Particle Physics. $278,149 (13 months).

Georgia, University of, Athens, Georgia. T. T. Chou, High Energy Hadron-Hadron Collisions. $15,800 (17 months).
HIGH ENERGY PHYSICS

Harvard University, Cambridge, Massachusetts. F. M. Pipkin and R. J. Glauber, High Energy Physics Research. $1,858,519 (15 months).

Harvard University, Cambridge, Massachusetts. Tai Tsun Wu, High Energy Collision Processes. $55,000.

Hawaii, University of, Honolulu, Hawaii. Vincent Z. Peterson and San Fu Tuan, Research in High Energy Nuclear Physics. $429,000 (11 months).

Indiana University, Bloomington, Indiana. Richard M. Heinz, Homer A. Neal, Archibald W. Hendry and Don B. Lichtenberg, Research in Experimental and Theoretical High Energy Physics. $385,000.

Institute for Advanced Study, Princeton, New Jersey. Roger F. Dashen and Stephen L. Adler, Problems in Particle Theory. $189,000 (14 months).

Johns Hopkins University, Baltimore, Maryland. Gabor Domokos, Research in Theoretical Physics. $66,000 (19 months).

Lehigh University, Bethlehem, Pennsylvania. Alvin Kanofsky, Study of Multiparticle Jet Production Using Calorimeters. $20,000.

Maryland, University of, College Park, Maryland. George A. Snow, High Energy Accelerator and Colliding Beam User Group. $985,000 (17 months).

Massachusetts Institute of Technology, Cambridge, Massachusetts. Herman Feshbach, Study Group on the Very Big Accelerator. $28,000 (3 years).

Massachusetts, University of, Amherst, Massachusetts. Janice B. Shafer, High Energy Physics. $110,000.

Minnesota, University of, Minneapolis, Minnesota. Stephen Gasiorowicz and Hans W. J. Courant, Theoretical and High Energy Physics Research. $375,000.

Ohio State University, Columbus, Ohio. Thomas A. Romanowski, K. Tanaka and W. W. Wada, High Energy Physics. $490,000 (16 months).

Oklahoma State University, Stillwater, Oklahoma. Mark A. Samuel, Higher-Order Corrections to the Anomalous Magnetic Moment of the Muon. $10,000.

Oregon, University of, Eugene, Oregon. Michael J. Moravcsik, Theory of Elementary Particles. $117,000.

HIGH ENERGY PHYSICS

Purdue University, Lafayette, Indiana. Frank J. Loeffler, Masao Sugawara, Earle C. Fowler, and D. Duane Carmony, Fundamental Particle Physics. $1,084,000 (17 months).

Stanford University, Stanford, California. Richard H. Pantell, Laser Particle Accelerator. $65,000.

Stanford University, Stanford, California. Alan Litke, Study of Photon Electron Production in $e^+e^-$ Annihilation. $8,586 (11 months).

Stanford University, Stanford, California. David M. Ritson, High Energy Physics. $360,000 (11 months).

Syracuse University, Syracuse, New York. K. C. Wall, Research Program in Elementary Particle Theory. $235,720 (16 months).

Tennessee, University of, Knoxville, Tennessee. William M. Bugg, Elementary Particle Interactions. $115,000.

Texas, University of, Austin, Texas. E. C. G. Sudarshan and Yuval Ne'eman, Research in Elementary Particle Theory. $265,000 (22 months).

Tufts University, Medford, Massachusetts. Allan M. Cormack, Experimental High Energy Physics Research. $325,000.

Wayne State University, Detroit, Michigan. Suraj N. Gupta, Quantum Theory of Fields. $32,000.

Wisconsin, University of, Madison, Wisconsin. Don D. Reeder, High Energy Physics Users and Theoretical Research. $1,970,472 (15 months).

Arkansas, University of, Fayetteville, Arkansas. Paul K. Kuroda, Nuclear Chemistry. $23,100 (18 months).

Brown University, Providence, Rhode Island. Stavros Pallieros and Frank S. Levin, Nuclear Excitations and Reaction Mechanisms. $66,000.

California Institute of Technology, Pasadena, California. Felix Boehm, Research in Nuclear Physics at Low and Intermediate Energies. $355,000 (13 months).

California, University of, Berkeley, California. Paul B. Price, Jr., Relativistic Heavy Ion Studies $101,000 (26 months).

California, University of, Los Angeles, California. George J. Igo, Intermediate Energy Nuclear Physics Users Group. $205,000.

California, University of, Los Angeles, California. Roy P. Haddock and B. M. K. Nefkens, Particle Physics. $230,000.

Carnegie-Mellon University, Pittsburgh, Pennsylvania. Morton Kaplan, Research in Nuclear Chemistry. $46,500 (15½ months).

Case Western Reserve University, Cleveland, Ohio. Harvey B. Willard, Medium Energy Nuclear Physics Research. $192,000 (15 months).

Chicago, University of, Chicago, Illinois. Nathan Sugarman and Anthony Turkevitch, Nuclear Chemistry Research. $210,000.

Columbia University, New York. Herbert Goldstein and L. J. Lidofsky, Relations Between Neutron Cross Sections and Neutron Transport Phenomena. $60,000 (15 months).

Denison University, Granville, Ohio. Ron R. Winters, Determination of Neutron Capture Cross Sections and Resonance Parameters. $10,792 (11 months).

Florida State University, Tallahassee, Florida. Gregory R. Choppin, Research in Nuclear Chemistry. $48,000.

Florida State University, Tallahassee, Florida. Raymond K. Sheline, Experimental Study of Nuclear Models - Decay Schemes and Nuclear Reactions. $103,000 (11 months).
Florida, University of, Gainesville, Florida. M. Luis Muga, Development and Applications of Thin Film Detectors. $34,000 (21 months).

Georgia Institute of Technology, Atlanta, Georgia. Richard W. Fink, Nuclear Spectroscopy with Radioactive Sources. $65,000.

Houston, University of, Houston, Texas. John C. Allred, B. W. Mayes, II and Ed V. Hungerford, III, Pion Interactions at Medium Energies. $165,000 (15 months).

Johns Hopkins University, Baltimore, Maryland. Leon Madansky and Y. K. Lee, Nuclear Moments and Nuclear Structure. $219,538 (15 months).

Louisiana State University, Baton Rouge, Louisiana. R. W. Huggett and Paul N. Kirk, Two-Body Dissociation of Light Nuclei in Nuclear Fields. $53,000.

Louisiana State University, Baton Rouge, Louisiana. Edward F. Zganjar, Rotation-Aligned Coupling and Axial Asymmetry in the Neutron Deficient Lanthanum Nuclei. $17,000.

Maryland, University of, College Park, Maryland. W. M. MacDonald and James J. Griffin, Theoretical Studies in Nuclear Reactions and Nuclear Structure. $154,000 (3 months).

Maryland, University of, College Park, Maryland. Harry D. Holmgren, Cyclotron Laboratory Nuclear Research and Accelerator Operations. $500,000 (13 months).

Maryland, University of, College Park, Maryland. Victor E. Viola, Studies of Heavy-Ion Induced Nuclear Reactions. $40,000 (5 months).

Massachusetts Institute of Technology, Cambridge, Massachusetts. Fred J. Eppling, Nuclear Physics Research. $10,892,961 (15 months).

Massachusetts, University of, Amherst, Massachusetts. Gerald A. Peterson, Fabrication of 180° Electron Scattering Facility for the Bates Linac. $229,000 (27 months).

Massachusetts, University of, Amherst, Massachusetts. Gerald A. Peterson, Nuclear Structure Studies by the Scattering of High Energy Electrons. $42,000.

Michigan, University of, Ann Arbor, Michigan. Glenn F. Knoll, Absolute Fission Cross Section Measurements. $90,000.

Michigan, University of, Ann Arbor, Michigan. W. C. Parkinson and R. S. Tickle, 83-Inch Cyclotron Research Program. $313,000 (30 months).

Minnesota, University of, Minneapolis, Minnesota. J. Morris Blair, George W. Greenlees and Norton M. Hintz, Experimental Nuclear Physics. $775,000.

Montana, University of, Missoula, Montana. Mark J. Jakobson, Total Pion Cross Section Measurements. $42,760.

New Mexico State University, Las Cruces, New Mexico. George R. Burleson, Experimental Measurement of Large-Angle Pion-Nucleus Scattering. $40,196.

New Mexico, University of, Albuquerque, New Mexico. Howard C. Bryant, Byron D. Dieterle, Christopher P. Leavitt and David M. Wolfe, Nucleon Physics Studies at Intermediate Energies. $170,000 (15 months).

New York, State University of, Stony Brook, New York. Gerald E. Brown, Andrew D. Jackson, Jr., and Thomas T. S. Kuo, Research in Theoretical Nuclear Physics. $310,000 (15 months).

New York, State University of, Stony Brook, New York. John M. Alexander, Nuclear Reaction Studies. $65,000.

North Carolina State University, Raleigh, North Carolina. L. W. Seagondollar, Nuclear Structure Research at the Triangle Universities Nuclear Laboratory. $112,000 (19 months).

North Carolina, University of, Chapel Hill, North Carolina. Eugen Merzbacher, Studies of Nuclear Processes. $130,000 (19 months).

Ohio University, Athens, Ohio. Raymond O. Lane, Study of Structure of Light Nuclei with Neutrons. $97,000 (15 months).

Oregon State University, Corvallis, Oregon. Walter D. Loveland, Studies of Low Energy Induced Nuclear Fission. $12,500.

Pittsburgh, University of, Pittsburgh, Pennsylvania. Robert L. Wolke, Recoil Studies of Nuclear Reactions. $10,000.

Princeton University, Princeton, New Jersey. Robert A. Naumann, Nuclear Chemistry Project. $125,000 (15 months).

Purdue University, Lafayette, Indiana. Norbert T. Porile, Deexcitation Processes in Nuclear Reactions. $103,000 (15 months).

Purdue University, Lafayette, Indiana. Patrick J. Daly, Radiochemical Investigations of Nuclear Properties. $60,000.

Purdue University, Lafayette, Indiana. Rolf M. Steffen, Study of Muonic Atoms. $83,309 (2 years).

Rensselaer Polytechnic Institute, Troy, New York. Daniel Sperber, Heavy Ion Nuclear Reaction Mechanisms. $34,000.

NUCLEAR SCIENCES

Rochester, University of, Rochester, New York. John R. Huizenga, Study of Heavy Ion Reactions and Transuranic Nuclei. $163,000 (15 months).

Temple University, Philadelphia, Pennsylvania. W. Kenneth McFarlane, L. B. Auerbach and V. L. Highland, Experimental Investigation of Nuclear and Particle Physics. $141,000 (15 months).

Tennessee, University of, Knoxville, Tennessee. Joseph R. Peterson, Physical-Chemical Studies of the Transuranium Elements. $43,000.

Tennessee, University of, Knoxville, Tennessee. Carrol R. Bingham and Leo L. Riedinger, Nuclear Spectroscopic Studies. $25,000.

Texas A&M University, College Station, Texas. Ronald D. Macfarlane, On-Line High-Resolution Mass Spectroscopy. $65,000.

Texas A&M University, College Station, Texas. Joseph B. Natowitz, Angular Momentum Effects in Nuclear Reactions. $65,000.

Texas A&M University, College Station, Texas. Thomas T. Sugihara, Nuclear Spectroscopy. $55,000.

Texas A&M University, College Station, Texas. Rand L. Watson, Ionization Phenomena. $50,000.

Texas A&M University, College Station, Texas. L. C. Northcliffe, Study of Neutron Proton Interaction in the 300-700 MeV Energy Region. $110,000.

Texas A&M University, College Station, Texas. Ronald A. Bryan, Medium Energy Phenomenology. $24,940.

Texas, University of, Austin, Texas. Taro Tamura and Peter J. Riley, Research in Nuclear Physics. $130,015.

Texas, University of, Austin, Texas. Wilfred J. Braithwaite, Gerald W. Hoffman, and C. Fred Moore, Research in Medium Energy Experimental Nuclear Physics. $35,707 (9 months).

Virginia, University of, Charlottesville, Virginia. Ralph G. Minehart, Stanley E. Sobottka, Klaus O. H. Ziock, and James S. McCarthy, Experiments on Nuclear Interactions of Pions and Electrons. $310,000 (15 months).

Washington University, St. Louis, Missouri. Edward S. Macias, Arthur C. Wahl, and Demetrios G. Sarantites, Investigations of Nuclear Structure, Reactions and Fission. $120,000.

Washington University, St. Louis, Missouri. Demetrios G. Sarantites, Investigations of Nuclear Structure and Nuclear Reactions. $42,000 (7 months).

Washington, University of, Seattle, Washington. Fred H. Schmidt, Ernest Henley, and David Bodansky, Experimental and Theoretical Nuclear Physics. $1,606,000 (15 months).
NUCLEAR SCIENCES

Wisconsin, University of, Madison, Wisconsin. Henry H. Barschall and Robert R. Borchers, Charged Particle Production Induced by 14 MeV Neutrons. $95,791 (17 months).
