

88-Inch Cyclotron - Isotopes Used and Produced

Claude Lyneis, Daniela Leitner and Mike Johnson

Overview

The 88-Inch Cyclotron supports a local research program in nuclear science and is the home of the Berkeley Accelerator Space Effects (BASE) facility. Operated by the Department of Energy's Office of Science, the Cyclotron is now jointly funded by the DOE and the National Security Space Community.

Cyclotron Beams

The 88-Inch is a K=140 sector-focused cyclotron with both light- and heavy-ion capabilities. **Protons and other light-ions are available at high intensities (10-20 pμA) up to maximum energies of 55 MeV (protons), 65 MeV (deuterons), 135 MeV (3He) and 140 MeV (4He).** Most heavy ions through uranium can be accelerated to maximum energies which vary with the mass and charge state.

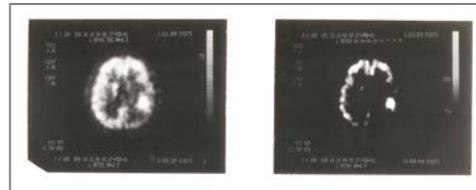

Research

The 88-Inch Cyclotron supports ongoing research programs in nuclear structure, astrophysics, heavy element studies, fundamental interactions, symmetries, and technology R&D by LBNL and U.C. Berkeley. Education of the next generation of scientists is an important mission. Major instrumentation under development at the 88-Inch Cyclotron includes GRETINA, the next generation Gamma Ray Energy Tracking Array, and VENUS (above), a third-generation superconducting ECR ion source.

Stable Beams From Separated Isotopes

| Element | mass | mass | mass |
|---------|------|------|------|
| Li | 6 | | |
| B | 10 | | |
| C | 13 | | |
| N | 15 | | |
| O | 17 | 18 | |
| Ne | 21 | 22 | |
| Mg | 25 | 25 | |
| Si | 29 | 30 | |
| S | 34 | 36 | |
| Ar | 36 | 38 | 40 |
| Ca | 44 | 46 | 48 |
| Ti | 46 | 50 | |
| Cr | 52 | 54 | |
| Fe | 54 | | |
| Ni | 64 | | |
| Ge | 70 | | |
| Kr | 78 | 80 | 86 |
| Zr | 96 | | |
| Xe | 124 | 129 | 136 |
| Xe | 129 | 136 | |
| Nd | 146 | | |
| Sm | 154 | | |
| Dy | 162 | | |

■ Important, rare and or expensive

Fluorine-18 produced at the 88-Inch Cyclotron (above) was used to study metabolic rates in healthy and malignant brain tissue. Dr. Tom Budinger's group at LBL in the 70's and 80's did pioneer PET R&D.

Other isotopes produced $^{11}\text{C}^{14}\text{O}$, ^{15}O , ^{56}Co , ^{76}Kr

The Berkeley Gas-Filled Separator (above) is the latest tool in studies of the chemistry and physics of the heaviest elements.

VENUS is one of the world's most powerful ECR Ion Sources and a prototype for FRIB

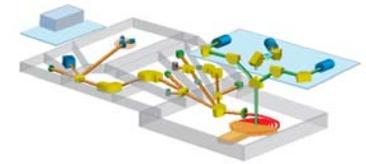

Gretina is a powerful gamma-ray tracking array under construction at LBNL.
